EDUCATION

- **University of Waterloo** — Waterloo, ON
  Computer Engineering (Bachelors) — *September 2016 - April 2021*

EXPERIENCE (MOST RECENT 3)

- **Google** — Mountain View, California, USA
  Software Developer — *September 2019 - December 2019*
  - Wrote a massive data processing pipeline to generate various text datasets.
  - Pretrained a BERT encoder on large volumes of english text using cutting edge parallel TPU technology.
  - Optimized database queries to run on Googles parallel query engine, reducing runtime by over 80%.
  - Modified a BERT transformer architecture to be used with an MLP in order to classify text post-encoding.
  - Achieved unprecedented precision classifying wikipedia text using a custom, modified transformer model.
  - Authored a research paper: Text Object Ontology, in which I present state of the art results in Text Classfication.
- **Google** — Montreal, Quebec, Canada
  Software Developer — *January 2019 - April 2019*
  - Wrote, and deployed (to hundreds of servers) a parallel label propagation algorithm to label unlabelled data samples.
  - Independently designed and implemented semisupervised learning pipeline for very large security datasets.Initial, unoptimized models realized accuracy and F1 scores above 98%.
  - Wrote custom evaluation binary to score the semi-supervised and unsupervised models.
  - Wrote a custom node transformation binary to generate new datasets.
- **Blackberry** — Waterloo, Ontario, Canada
  Software Developer — *May 2018 - August 2018*
  - Developed deep learning model for syntax conversion from PL/SQL (oracle) to mySQL (100% precision).
  - Developed and optimized dynamic scripts to efficiently and securely migrate over 20% of company databases (schema, procedures and data) between different, incompatible platforms.
  - Customized, optimized an open source mySQL DB (mariaDB) to increase insert speed by 12%.
  - Contributed greatly to many other confidential projects, currently being deployed to millions globally.
- **Personal Projects**
  Software Developer — *Feb 2011 - Present*
  - Wrote a model to accurately predict stock price volatility using financial derivative (options) flow.
  - Independently developed 3200+ elo chess engine (neural network). Trained using self generated dataset (90+ million unique chess positions).

SKILLS

- **Operating Systems**: Linux (Debian/Ubuntu), macOS, Windows
- **Languages**: C++, Python, Java, SQL, Bash, Javascript
- **Technologies**: Tensorflow, scikit-learn, .NET, Node.js, ASP.NET, MATLAB, Hadoop, Express.js
- **Tools**: Git, XCode, Visual Studio, Eclipse, VS Code, Azure, mySQL, mariaDB, MongoDB, AWS
